Publications of Prof. Asen L. Dontchev

RESEARCH MONOGRAPHS

[4] Lectures on variational analysis. Appl. Math. Sci., vol. **205**. Springer, Cham, 2021.

[3] Implicit Functions and Solution Mappings. Springer Monographs in Mathematics. Dordrecht, Springer 2009; Springer Ser. Oper. Res. Financ. Eng. New York, Springer, 2014 (with R. T. Rockafellar).

[2] Well-Posed Optimization Problems. Lecture Notes in Math., vol. **1543**. Berlin, Springer-Verlag, 1993 (with T. Zolezzi).

[1] Perturbations, Approximations and Sensitivity Analysis of Optimal Control Systems. Lect. Notes Control Inf. Sci., vol. **52**. Berlin, Springer, 1983 (translation: in Russian by Mir, Moscow, 1987).

TEXTBOOKS

[2] Mathematical Optimization. Sofia, Sofia Univ. Press, 1987 (with P. Kenderov and G. Khristov, in Bulgarian).

[1] Optimal Control. Sofia, Nauka i Izkustvo, 1983 (in Bulgarian).

PAPERS

[126] Constrained data smoothing via optimal control. *Optimal Control Appl. Methods* **43**, *4* (2022), 1257–1269 (with I. V. Kolmanovsky and T. B. Tran).

[125] On existence of solutions of parametrized generalized equations. *Set-Valued Var. Anal.* **29**, *3* (2021), 735–744.

[124] Sensitivity-based warmstarting for nonlinear model predictive control with polyhedral state and control constraints. *IEEE Trans. Automat. Control* **65**, *10* (2020), 4288–4294 (with D. Liao-McPherson, M. M. Nicotra, I. V. Kolmanovsky and V. M. Veliov).

[123] The radius of metric subregularity. *Set-Valued Var. Anal.* **28**, *3* (2020), 451–473 (with H. Gfrerer, A. Y. Kruger and J. V. Outrata).

[122] Approximating optimal finite horizon feedback by model predictive control. *Systems Control Lett.* **139** (2020), 104666, 9 pp (with I. V. Kolmanovsky, M. I. Krastanov, V. M. Veliov and P. T. Vuong).

[121] Bartle-Graves theorem revisited. *Set-Valued Var. Anal.* **28**, *1* (2020), 109–122.

[120] Inexact Newton–Kantorovich methods for constrained nonlinear model predictive control. *IEEE Trans. Automat. Control* **64**, *9* (2019), 3602–3615 (with M. Huang, I. V. Kolmanovsky and M. M. Nicotra).

[119] On the existence of Lipschitz continuous optimal feedback control. *Vietnam J. Math.* **47**, *3* (2019), 579–597 (with M. I. Krastanov and V. M. Veliov).

[118] Radius theorems for monotone mappings. *Set-Valued Var. Anal.* **27**, *3* (2019), 605–621 (with A. Eberhard and R. T. Rockafellar).

[117] Lipschitz stability in discretized optimal control with application to SQP. *SIAM J. Control Optim.* **57**, *1* (2019), 468–489 (with I. Kolmanovsky, M. I. Krastanov, M. Nicotra, and V. M. Veliov).

[116] Kantorovich-type theorems for generalized equations. *J. Convex Anal.* **25**, *2* (2018), 459–486 (with R. Cibulka, J. Preininger, V. Veliov and T. Roubal).

[115] Metrically regular differential generalized equations. *SIAM J. Control Optim.* **56**, *1* (2018), 316–342 (with R. Cibulka, M. I. Krastanov and V. M. Veliov).

[114] Strong metric subregularity of mappings in variational analysis and optimization. *J. Math. Anal. Appl.* **457**, *2* (2018), 1247–1282 (with R. Cibulka and A. Y. Kruger).

[113] Lyusternik-Graves theorems for the sum of a Lipschitz function and a set-valued mapping. *SIAM J. Control Optim.* **54**, *6* (2016), 3273–3296 (with R. Cibulka and V. M. Veliov).

[112] A nonsmooth Robinson's inverse function theorem in Banach spaces. *Math. Program.* **156**, *1–2* (2016), 257–270. (with R. Cibulka).

[111] Inexact Newton methods and Dennis-More theorems for nonsmooth generalized equations. *SIAM J. Control Optim.* **53**, *2* (2015), 1003–1019 (with R. Cibulka and M. H. Geoffroy).

[110] A proof of the Lyusternik-Graves theorem. *Optimization* **64**, *1* (2015), 41–48.

[109] On one-sided Lipschitz stability of set-valued contractions. *Numer. Funct. Anal. Optim.* **35**, *7–9* (2014), 837–850 (with S. Adly and M. Théra).

[108] Local convergence of quasi-Newton methods under metric regularity. *Comput. Optim. Appl.* **58**, *1* (2014), 225–247 (with F. J. Arágon Artacho, A. Belyakov and M. Lopez).

[107] The weak Ekeland variational principle and fixed points. *Nonlinear Anal.* **102** (2014), 91–96 (with G. Beer).

[106] Local convergence of quasi-Newton methods under metric regularity. *Comp. Optim. and Appl.* electronically published Oct. 2013, DOI: 10.1007/S10589-013-9615-Y (with F. J. Aragón Artacho, A. Belyakov and M. López).

[105] An Euler-Newton continuation method for trackings solution trajectories of parametric variational inequalities. *SIAM J. Control Optim.* **52**, *3* (2013), 1823–1840 (with M. I. Krastanov, R. T. Rockafellar and V. M. Veliov).

[104] Convergence of inexact Newton methods for generalized equations. *Math. Programming B* **139**, *1–2* (2013), 115–137 (with R. T. Rockafellar).

[103] Generalizations of the Dennis-Moré theorem. *SIAM J. Optim.* **22**, *3* (2012), 821–830.

[102] Parametric stability of solutions in models of economic equilibrium. *J. Convex Anal.* **19**, *4* (2012), 975–997 (with R. T. Rockafellar).

[101] Lyusternik-Graves theorem and fixed points II. *J. Convex Anal.* **19**, *4* (2012), 955–973 (with H. Frankowska).

[100] Metric regularity of Newton's iteration. *SIAM J. Control Optim.* **49**, *2* (2011), 339–362 (with F. J. Aragón Artacho, M. Gaydu, M. Geoffroy and V. Veliov).

[99] Lyusternik-Graves theorem and fixed points. *Proc. Amer. Math. Soc.* **139**, *2* (2011), 521–534 (with H. Frankowska).

[98] Newton's method for generalized equations: a sequential implicit function theorem. *Math. Program. Ser. B* **123**, *1* (2010), 139–159 (with R. T. Rockafellar).

[97] Isolated calmness of solution mappings in convex semi-infinite optimization. *J. Math. Anal. Appl.* **350**, *2* (2009), 829–837 (with M. J. Cánovas, M. A. López and J. J. Parra).

[96] Metric regularity under approximations. *Control Cybern.* **38**, *4B* (2009), 1283–1303 (with V. Veliov).

[95] Robinson's implicit function theorem and its extensions. *Math. Programming A* **117**, *1–2* (2009), 120–147 (with R. T. Rockafellar).

[94] Extensions of Clarke's proximal characterization for reachable mappings of

differential inclusions. *J. Math. Anal. Appl.* **348**, *1* (2008), 454–460 (with T. Donchev).

[93] On the inner and outer norms of sublinear mappings. *Set-Valued Anal.* **15**, *1* (2007), 61–65 (with F. J. Aragón Artacho).

[92] Aubin criterion for metric regularity. *J. Convex Anal.* **13**, *2* (2006), 281–297 (with M. Quincampoix and N. Zlateva).

[91] Parametrically robust optimality in nonlinear programming. *Appl. Comput. Math.* **5**, *1* (2006), 59–65 (with R. T. Rockafellar).

[90] Perturbations and metric regularity. *Set-Valued Anal.* **13**, *4* (2005), 417–438 (with A. S. Lewis).

[89] Metric regularity of semi-infinite constraint systems. *Math. Program.* **104**, *2–3* (2005), 329–346 (with M. J. Cánovas, M. A. López and J. J. Parra).

[88] Regularity and conditioning of solution mappings in variational analysis. *Set-Valued Anal.* **12**, *1–2* (2004), 79–109 (with R. T. Rockafellar).

[87] A local selection theorem for metrically regular mappings. *J. Convex Anal.* **11**, *1* (2004), 81–94.

[86] On the Bartle-Graves theorem. *Proc. Amer. Math. Soc.* **131**, *8* (2003), 2553–2560 (with J. M. Borwein).

[85] Singular Perturbations in infinite-dimensional control systems. *SIAM J. Control Optim.* **42**, *5* (2003), 1795–1812 (with T. D. Donchev).

[84] The radius of metric regularity. *Trans. Amer. Math. Soc.* **355**, *2* (2003), 493–517 (with A. S. Lewis and R. T. Rockafellar).

[83] Quadratic convergence of Newton's method for convex interpolation and smoothing. *Constr. Approx.* **19**, *1* (2003), 123–143 (with H. Qi and L. Qi).

[82] A Newton method for shape-preserving spline interpolation. *SIAM J. Optim.* **13**, *2* (2002), 588–602 (with H. Qi, L. Qi and H. Yin).

[81] Primal-dual solution perturbations in convex optimization. In: Well-posedness in optimization and related topics (Gargnano, 1999) *Set-Valued Anal.* **9**, *1–2* (2001), 49–65 (with R. T. Rockafellar).

[80] Ample parameterization of variational inclusions. *SIAM J. Optim.* **12**, *1* (2001), 170–187 (with R. T. Rockafellar).

[79] Convergence of Newton's method for convex best interpolation. *Numer. Math.* **87**, *3* (2001), 435–456 (with H. Qi and L. Qi).

[78] The Euler approximation in state constrained optimal control. *Math. Comp.* **70**, *233* (2001), 173–203 (with W. W. Hager).

[77] Continuity properties of Newton's mapping for variational inclusions. *C. R. Acad. Bulgare Sci.* **53**, *10* (2000), 19–22.

[76] On quantitative stability in optimization and optimal control. *Set-Valued Anal.* **8**, *1–2* (2000), 31–50 (with W. W. Hager, K. Malanowski and V. M. Veliov).

[75] Second-order Runge-Kutta approximations in control constrained optimal control. *SIAM J. Numer. Anal.* **38**, *1* (2000), 202–226 (with W. W. Hager and V. M. Veliov).

[74] On the effect of neglecting sensor dynamics in parameter identification problems. *SIAM J. Control Optim.* **38**, *4* (2000), 1309–1321 (with M. Polis and V. M. Veliov).

[73] A dual method for deterministic parameter identification. *IEEE Trans. Automat. Control* **45**, *7* (2000), 1341–1346 (with M. Polis and V. M. Veliov).

[72] Error bounds for Euler approximation of a state and control constrained optimal control problem. *Numer. Funct. Anal. Optim.* **21**, *5–6* (2000), 653–682 (with W. W. Hager and K. Malanowski).

[71] Uniform convergence and mesh independence of Newton's method for discretized variational problems. *SIAM J. Control Optim.* **39**, *3* (2000), 961–980 (with W. W. Hager and V. M. Veliov).

[70] The Graves theorem revisited II: Robust convergence of the Newton method. *Pliska Stud. Math. Bulgar.* **12** (1998), 31–38.

[69] A new approach to Lipschitz continuity in state constrained optimal control. *Systems Control Lett.* **35**, *3* (1998), 137–143 (with W. W. Hager).

[68] A proof of the necessity of linear independence condition and strong second-order sufficient optimality condition for Lipschitzian stability in nonlinear programming. *J. Optim. Theory Appl.* **98**, *2* (1998), 467–473.

[67] Lipschitzian stability for state constrained nonlinear optimal control. *SIAM J. Control Optim.* **36**, *2* (1998), 698–718 (with W. W. Hager).

[66] Uniform convergence of the Newton method for Aubin continuous maps. *Serdica Math. J.* **22**, *3* (1996), 385–398.

[65] Characterizations of strong regularity for variational inequalities over polyhedral convex sets. *SIAM J. Optim.* **6**, *4* (1996), 1087–1105 (with R. T. Rockafellar).

[64] An a priori estimate for discrete approximations in nonlinear optimal control. *SIAM J. Control Optim.* **34**, *4* (1996), 1315–1328.

[63] A Tikhonov-type theorem for singularly perturbed differential inclusions. *Nonlinear Anal.* **26**, *9* (1996), 1547–1554 (with Ts. Donchev and I. Slavov).

[62] Best interpolation in a strip II: reduction to unconstrained convex optimization. *Comp. Optim. Appl.* **5**, *3* (1996), 233–251 (with I. Kolmanovsky).

[61] Local convergence of the Newton method for generalized equations. *C. R. Acad. Sci. Paris Sér. I* **322**, *4* (1996), 327–331.

[60] The Graves theorem revisited. *J. Convex Anal.* **3**, *1* (1996), 45–53.

[59] Implicit function theorems for generalized equations. *Math. Programming* **70**, *1* (1995), 91–106.

[58] State constraints in the linear regulator problem: a case study. *J. Optim. Theory Appl.* **87**, *2* (1995), 323–347 (with I. Kolmanovsky).

[57] Optimality, stability and convergence in nonlinear control. *Appl. Math. Optim.* **31**, *3* (1995), 297–326 (with W. W. Hager, A. B. Poore and B. Yang).

[56] Euler approximation to the feasible set. *Num. Funct. Anal. Optim.* **15**, *3–4* (1994), 245–262 (with W. W. Hager).

[55] On a paper by R. Dapatadu, C. Gibson, and J. Gregory: "Numerical methods for nonlinear optimal control problems: application to abnormal problems". *J. Math. Anal. Appl.* **182**, *1* (1994), 297–298.

[54] Implicit functions, Lipschitz maps, and stability in optimization. *Math. Oper. Res.* **19**, *3* (1994), 753–768 (with W. W. Hager).

[53] An inverse mapping theorem for set-valued maps. *Proc. Amer. Math. Soc.* **121**, *2* (1994), 481–489 (with W. W. Hager).

[52] Best interpolation in a strip. *J. Approx. Theory* **73**, *3* (1993), 334–342.

[51] Lipschitzian stability in nonlinear control and optimization. *SIAM J. Control Optim.* **31**, *3* (1993), 569–603 (with W. W. Hager).

[50] Time scale decomposition of the reachable set of linear systems. *Mathematics of Control Signals Systems* **5**, *3* (1992), 327–340.

[49] Difference methods for differential inclusions: a survey. *SIAM Review* **34**, *2* (1992), 263–294 (with F. Lempio).

[48] On the admissible controls of constrained linear systems. *C. R. Acad. Bulgare Sci.* **42**, *11* (1989), 33–36.

[47] Duality and well-posedness in convex interpolation. *Numer. Funct. Anal. Optim.* **10**, *7–8* (1989), 673–690 (with Bl. Kalchev).

[46] A proof of Robinson's theorem. Mathematics and mathematical education

(Proc. 18-th Spring Conf. Bulg. Math. Union, Albena, 1989). Sofia, Publishing House of the Bulgarian Academy of Sciences, 1989, 290–295.

[45] Error estimates for discretized differential inclusions. *Computing* **41**, *4* (1989), 349–358 (with E. Farhi).

[44] Lipschitz properties of the attainable set of singularly perturbed linear systems. *Systems Control Lett.* **11**, *5* (1988), 395–391 (with I. Slavov).

[43] On convex and nonnegative best interpolation. *C. R. Acad. Bulgare Sci.* **41**, *6* (1988), 21–24 (with Bl. Kalchev).

[42] Duality methods in constrained best interpolation. *Math. Balkanica (N.S.)* **1**, *1* (1987), 96–105.

[41] Continuity of the family of trajectories of linear control systems with respect to singular perturbations. *Dokl. Akad. Nauk SSSR* **293**, *2* (1987), 274–278 (in Russian); English translation in: *Soviet Math. Dokl.* **35**, *2* (1987), 283–286 (with V. Veliov).

[40] The constrained linear-quadratic optimal control problem. Mathematics and mathematical education (Proc. 16-th Spring Conf. Bulg. Math. Union, Sunny Beach, 1987). Sofia, Publishing House of the Bulgarian Academy of Sciences, 1987, 84–89 (in Bulgarian).

[39] Singular perturbations in linear control systems with constraints. In: Proc. 25-th IEEE Conference on Decision and Control, Athens, 10–12 December 1986, 1781–1783, DOI: 10.1109/CDC.1986.267266 (with V. Veliov).

[38] Singular perturbations in linear differential inclusions. I. Convergence of the trajectories. *Godishnik Vissh. Uchebn. Zaved. Prilozhna Mat.* **22**, *4* (1986) 9–21 (with V. M. Veliov).

[37] Singular perturbations in linear differential inclusions. II. Continuity of the solution set. *Godishnik Vissh. Uchebn. Zaved. Prilozhna Mat.* **22**, *4* (1986) 23–33 (with V. M. Veliov).

[36] Singular perturbations in linear differential inclusions. III. Continuity of the marginal function. *Godishnik Vissh. Uchebn. Zaved. Prilozhna Mat.* **22**, *4* (1986) 35–45 (with V. M. Veliov).

[35] Equivalent perturbations and approximations in optimal control. *C. R. Acad. Bulgare Sci.* **39**, *8* (1986), 27–30.

[34] On the regularity of Kuhn-Tucker curve. *SIAM J. Control Optim.* **24**, *2* (1986), 169–176 (with H. Th. Jongen).

[33] A regularized conditional gradient method applied to singularly perturbed optimal control systems. *Serdica* **11**, *2* (1985), 180–185 (with M. G. Dmitriev and V. M. Veliov).

[32] Singular perturbations in linear control systems with weakly coupled stable and unstable fast subsystems. *J. Math. Anal. Appl.* **110**, *1* (1985), 1–30 (with V. Veliov).

[31] Restricted length configurations. *Teoret. Prilozhna Mekh.* **16**, *4, 3, 5–6* (1985), 15–21 (with G. Iliev and M. Konstantinov).

[30] Constrained interpolation via optimal control. Mathematics and mathematical education (Proc. 14-th Spring Conf. Bulg. Math. Union, Sunny Beach, 1985). Sofia, Publishing House of the Bulgarian Academy of Sciences, 1985, 385–392 (with G. L. Iliev and M. M. Konstantinov).

[29] Relaxation and well-posedness in nonlinear optimal processes. *Systems Control Lett.* **3** (1983), 177–179 (with B. Mordukhovich).

[28] On the behaviour of solutions of linear autonomous differential inclusions at infinity. *C. R. Acad. Bulgare Sci.* **36**, *8* (1983), 1021–1024 (with V. M. Veliov).

[27] Singular perturbations in Mayer's problem for linear systems. *SIAM J. Control Optim.* **21**, *4* (1983), 566–581 (with V. Veliov).

[26] A singularly perturbed optimal control problem with fixed final state and constrained control, *Control Cybern.* **11**, *1–2* (1982), 19–28 (with V. Veliov; in Russian, Polish summary).

[25] Error estimates for a discrete approximation to constrained control problems. *SIAM J. Numer. Analysis* **18**, *3* (1981), 500–514.

[24] Efficient estimates of the solutions of perturbed control problems. *J. Optim. Theory Appl.* **35**, *1* (1981), 85–109.

[23] On sensitivity of optimal control problems. *Vestsi Akad. Navuk BSSR Ser. Fiz.-Mat. Navuk* **5** (1981), 24–28, 137 (in Russian).

[22] On the convergence of a finite-difference approximation to optimal control problems with integral constraints. *Serdica* **7**, *3* (1981) 265–274 (in Russian).

[21] Error estimates for a discrete approximation to constrained control problems. *C. R. Acad. Bulgare Sci.* **33**, *6* (1980), 757–760.

[20] Method of optimal synthesis of control distributed processes. *Problemi Tehn. Kibernet.* **9** (1980), 27–35 (with I. P. Cvetanov and K. Georgieva; in Bulgarian, English, Russian summary).

[19] Convergence of solutions of the linear singularly perturbed time-optimal response. *Prikl. Mat. Mekh.* **43**, *3* (1979), 466474 (in Russian); English translation in: *J. Appl. Math. Mech.* **43**, *3* (1979), 502511 (with T. Gichev).

[18] Convex singularly perturbed optimal control problem with fixed final state. Controllability and convergence. *Math. Operationsforsch. Statist. Ser. Optim.* **10**, *3* (1979), 345–355 (with T. Gichev).

[17] Convergence of the solution of singularly perturbed linear differential equations. *Godishnik Vissh. Uchebn. Zaved. Prilozhna Mat.* **15**, *1* (1979), 69–82 (with T. Gichev).

[16] Convergence of solutions of convex optimal control problems with time delay, *Rend. Mat. (6)* **11**, *4* (1978), 635–643 (with T. Gichev).

[15] A dual Ritz method for solving optimal control problems with equality state constraints. *Arch. Automat. Telemech.* **23**, *1–2* (1978), 37–44.

[14] Singular perturbation in optimal control problems with fixed final state. *C. R. Acad. Bulgare Sci.* **31**, *8* (1978), 953–955 (with T. Gichev).

[13] Linear optimal control systems with singular perturbation and convex performance index. *Serdica* **4**, *1* (1978), 24–35 (with T. Gichev).

[12] Correctness of a singularly perturbed optimal control problem with a convex quality criterion *C. R. Acad. Bulgare Sci.* **30**, *10* (1977), 1393–1394 (with T. R. Gichev, in Russian).

[11] Estimates of the solution of the problem of a conditional extremum by means of its best approximation. *Serdica* **3**, *3* (1977) 236–241 (with R. Ivanov, in Russian).

[10] Linear model simplification for singularly perturbed optimal control systems. *C. R. Acad. Bulgare Sci.* **30**, *4* (1977), 499–502.

[9] Convergence of the solution of an optimal control problem with a free right end with respect to a small parameter multiplying the derivative. *Annuaire Univ. Sofia Fac. Math. Mec.* **71**, *1* (1976), 247–256 (with T. R. Gichev, in Russian, English summary).

[8] Dynamic optimization and sensitivity analysis of multilevel control systems. *Control and Cybern.* **5**, *3* (1976), 33–52 (with G. Petriczek, P. Płonka and A. Urbanik).

[7] On the comparison of models of optimal control systems. *C. R. Acad. Bulgare Sci.* **28**, *10* (1975), 1307–1310.

[6] Sensitivity analysis of optimal control systems with small time delay. *Control Cybernet* **4**, *3–4* (1975), 91–104.

[5] Structural sensitivity analysis in Hilbert space *Arch. Automat. i Telemech.* **19** (1974), 449–457. (in Polish. English, Russian summary)

[4] Sensitivity analysis of linear infinite-dimensional optimal control systems under changes of system order. *Control Cybernet.* **3**, *3–4* (1974), 21–35.

[3] Structural sensitivity analysis in Hilbert space. *Bull. Acad. Polon. Sci. Sér. Sci. Tech.* **22** (1974), 977–981.

[2] Basic relations in the performance sensitivity analysis of optimal control systems. *Control Cybernet.* **3**, *3–4* (1974), 119–139 (with A. P. Wierzbicki).

[1] Coordination and sensitivity analysis of a multilevel control system with convex performance index. *Arch. Automat. i Telemech.* **18** (1973), 71–80.

CHAPTERS IN BOOKS

[29] The inverse function theorems of L. M. Graves. In: Splitting algorithms, modern operator theory, and applications. (Eds H. H. Bauschke, R. S. Burachik, D. Russell Luke) Cham, Springer, 2019, 153–163.

[28] On some open problems in optimal control. In: Control systems and mathematical methods in economics. (Essays in honor of Vladimir M. Veliov. Eds G. Feichtinger, R. M. Kovacevic, G. Tragler) Lecture Notes in Econom. and Math. Systems, vol. **687**. Cham, Springer, 2018, 3–13.

[27] ω-limit sets for differential inclusions. In: Analysis and geometry in control theory and its applications. (Eds P. Bettiol, P. Cannarsa, G. Colombo, M. Motta, F. Rampazzo) Springer INdAM Ser., vol. **11**. Cham, Springer, 2015, 159–169 (with M. I. Krastanov and V. M. Veliov).

[26] On derivative criteria for metric regularity. In: Computational and Analytical Mathematics. (In honor of Jonathan Borwein's 60th birthday. Papers from the workshop (JonFest) held at Simon Fraser University, Burnaby, BC, May 16–20, 2011. Eds D. H. Bailey, H. H. Bauschke, P. Borwein, F. Garvan, M. Théra, J. D. Vanderwerff, H. Wolkowicz) Springer Proc. Math. Stat., vol. **50** Springer, New York, 2013, 361–370 (with H. Frankowska).

[25] Convergence of the proximal point method for metrically regular mappings. In: CSVAA 2004 – control set-valued analysis and applications. (Proceedings of the conference, University of "Antilles and Guyane", Pointe-à-Pitre, April 2004. Eds A. Pietrus, M. H. Geoffroy) ESAIM Proc., vol. **17**. Les Ulis, EDP Sciences, 2007, 1–8 (with F. Aragón Artacho and M. H. Geoffroy).

[24] An introduction to strong regularity. In: Parametric Optimization and Related Topics VII (Selected papers from the 7th International Conference, Benemerita Universidad Autonoma, Puebla, March 10–15, 2002. Eds J. Guddat, H. Th. Jongen, J.-J. Ruckmann, M. Todorov) Aportaciones Mat. Investig., vol. **18** [Mathematical Contributions: Research] Mexico, Sociedad Matematica Mexicana, 2004, 45–80.

[23] Quadratic convergence of Newton's method for constrained interpolation. In: Approximation theory X (Wavelets, splines, and applications. Papers from the 10th International Symposium, St. Louis, MO, March 26–29, 2001. Eds C. K. Chui, L. L. Schumaker, J. Stockler) Innov. Appl. Math. Nashville, TN, Vanderbilt University Press, 2002, 261–270 (with H. Qi, L. Qi).

[22] Lipschitzian stability of Newton's method. In: System modelling and optimization. Methods, theory and applications. (Proceedings of the 19th IFIP TC7 Conference held in Cambridge, July 12–16, 1999. Eds M. J. D. Powell, S. Scholtes) Boston, MA, Kluwer Academic Publishers, 2000, 119–147.

[21] A characterization of Lipschitzian stability in optimal control. In: Calculus of variations and optimal control. (Vol. 2 of the Proceedings of the International Conference on the Calculus of Variations and Related Topics held at the TechnionIsrael Institute of Technology, Haifa, March 25–31, 1998. Eds A. Ioffe, S. Reich and I. Shafrir) Chapman & Hall/CRC Res. Notes Math., vol. **411**. Boca Raton, FL, Chapman & Hall/CRC, 2000, 62–76 (with K. Malanowski).

[20] Robinson's strong regularity implies robust local convergence of Newton's method. In: Optimal Control. (Theory, algorithms, and applications. Papers from the conference, University of Florida, Gainesville, FL, February 27–March 1, 1997. Eds W. H. Hager, P. M. Pardalos) Appl. Optim., vol. **15**. Dordrecht, Kluwer Academic Publishers, 1998, 116–129 (with S. P. Dokov).

[19] Characterizations of Lipschitzian stability in nonlinear programming. In: Mathematical Programming with Data Perturbations (Ed. A. V. Fiacco), Lecture Notes in Pure and Appl. Math., vol. **195**. New York, Marcel Dekker, Inc., 1998, 65–82 (with R. T. Rockafellar).

[18] Local analysis of a Newton-type method based on partial linearization, In: The mathematics of numerical analysis. (Proceedings of the Twenty-fifth AMS-SIAM Summer Seminar on Applied Mathematics held in Park City, Utah, July 17–August 11, 1995. Eds J. Renegar, M. Shub, S. Smale) Lectures in Appl. Math., vol. **32**. Providence, RI, AMS, 1996, 295–306.

[17] Discrete approximations in optimal control. In: Nonsmooth analysis and geometric methods in deterministic optimal control. (Proceedings of the workshop held in Minneapolis, Minnesota, February 8–17, 1993. Eds B. S. Mordukhovich, H. J. Sussmann) IMA Vol. Math. Appl., vol. **78**. New York, Springer-Verlag, 1996, 59–80.

[16] Implicit functions defined by generalized equations. In: World Congress of Nonlinear Analysts'92. Vol. IIV. (Proceedings of the First Congress, Tampa, Florida, August 19–26, 1992. Ed. V. Lakshmikantham) Berlin, Walter de Gruyter & Co., 1996, 2289–2298 (with W. W. Hager).

[15] Characterizations of Lipschitz stability in optimization. In: Recent Developments in Well-posed Variational Problems (Eds R. Lucchetti, J. Revalski) Math. Appl., vol. **331**. Dordrecht, Kluwer Academic Publishers Group, 1995, 95–115.

[14] On regularity of optimal control. In: Recent Developments in Optimization (Proceedings of the Seventh French-German Conference on Optimization, Dijon, June 27–July 2, 1994. Eds R. Durier, C. Michelot) Lecture Notes in Econom. and Math. Systems, vol. **429**. Berlin, Springer-Verlag, 1995, 125–135 (with I. Kolmanovsky).

[13] On Robinson's implicit function theorems. In: Set-valued Analysis and Differential Inclusions (Papers from the International Workshop, Pamporovo, September 1990. Eds A. B. Kurzhanski, V. M. Veliov) Progr. Systems Control Theory, vol. **16**. Boston, MA, Birkhäuser Boston, Inc., IIASA, Laxenburg, 1993, 75–92 (with W. W. Hager).

[12] Discretization error in optimal control. In: Optimal control of partial differential equations. (Proceedings of the IFIP WG 7.2 International Conference, Irsee, April 9–12, 1990. Eds K.-H. Hoffmann, W. Krabs) Lect. Notes Control Inf. Sci., vol. **149**. Berlin, Springer-Verlag, 1991, 120–128 (with W. W. Hager).

[11] Upper semicontinuity of solutions of singularly perturbed differential inclusions. In: System Modeling and Optimization (Proceedings of the Fourteenth IFIP Conference, Leipzig, July 37, 1989. Eds H.-J. Sebastian, K. Tammer) Lect. Notes Control Inf. Sci., vol. **143**. Berlin, Springer-Verlag, 1990, 273–280 (with I. Slavov).

[10] A class of convergent methods for constrained interpolation. In: Numerical methods and applications. (Proceedings of the International Conference, Sofia, August 22–27, 1989. Eds B. Sendov, R. Lazarov, I. Dimov). Sofia,

Publishing House of the Bulgarian Academy of Sciences, 1989, 131–136 (with Bl. D. Kalchev).

[9] Equivalent perturbations and approximations in optimal control. In: Trends in mathematical optimization. (Papers from the Fourth French-German Conference on Optimization held in Irsee, April 21–26, 1986. Eds K.-H. Hoffmann, J.-B. Hiriart-Urruty, C. Lémarechal, J. Zowe). Internat. Schriftenreihe Numer. Math., vol. **84** [International Series of Numerical Mathematics]. Basel, Birkhauser Verlag, 1988, 43–54.

[8] An averaged modulus of continuity for multivalued maps and its applications to differential inclusions. In: Constructive theory of functions. (Proceedings of the International Conference, Varna, May 24–31, 1987. Eds B. Sendov, P. Petrushev, K. Ivanov, R. Maleev). Sofia, Publishing House of the Bulgarian Academy of Sciences, 1988, 127–131. (with E. M. Farkhi).

[7] Duality in the constrained best interpolation. In: Optimization in mathematical physics. (Papers from the Eleventh Conference on Methods and Techniques of Mathematical Physics held in Oberwolfach, December 1–7, 1985. Eds B. Brosowski, E. Martensen) Methoden Verfahren Math. Phys., vol. **34** [Methods and Procedures in Mathematical Physics]. Frankfurt am Main, Verlag Peter D. Lang, 1987, 117–133.

[6] On the order reduction of linear optimal control systems in critical cases. In: Systems and Optimization (Proceedings of the Twente Workshop held at the Twente University of Technology, Enschede, April 16–18, 1984, Eds A. Bagchi and H. Th. Jongen) Lect. Notes Control Inf. Sci., vol. **66**. Berlin, Springer-Verlag, 1985, 180–185 (with V. M. Veliov).

[5] On the order reduction of optimal control systems. In: Mathematical Control Theory. Mathematical control theory (Eds C. Olech, B. Jakubczyk, J. Zabczyk) Banach Center Publ., vol. **14**. Warsaw, PWN—Polish Scientific Publishers, 1985, 181–198.

[4] Continuity and asymptotics of the marginal function in optimal control. In: Infinite programming. (Proceedings of the international symposium on infinite-dimensional linear programming, Churchill College, Cambridge, September 7–10, 1984. Eds E. J. Anderson, A. B. Philpott) Lecture Notes in Econom. and Math. Systems, vol. **259**. Berlin, Springer-Verlag, 1985, 185–193.

[3] Singular perturbation in linear differential inclusions—critical case. In: Parametric optimization and approximation. (Proceedings of the international symposium held at the Mathematical Research Institute Oberwolfach, Ober-

wolfach, October 1622, 1983. Eds B. Brosowski, F. Deutsch) Internat. Schriftenreihe Numer. Math., vol. **72** [International Series of Numerical Mathematics]. Basel, Birkhauser Verlag, 1985, 108–125. (with V. M. Veliov).

[2] Continuity of the marginal function of a singularly perturbed optimal control problem. In: VII Konferencja szkoleniowa z teorii zagadnien ekstremalnych. Universytet Lodzki – Institut Matematyki, Lodz, 1985 (with V. M. Veliov).

[1] Convergence of Ritz's method uniformly in a singular perturbation for optimal control problems. In: Numerical Analysis of Singular Perturbation Problems (Proc. Conf., Math. Inst., Catholic Univ., Nijmegen, May 30–June 2, 1978, Eds. P. W. Hemker and J. J. H. Miller). London-New York, Academic Press Inc., 1979, 143–149.
